## Marine Ecosystem

Marine waters cover two-thirds of the surface of the Earth. Western part of the Pacific Ocean reach depths in excess of 32,800 feet. Within this ocean habitat live more than one millions marine species.

A vibrant underwater scene featuring a large school of tropical fish, likely sergeant majors or similar, swimming in a dense, layered pattern. The fish have distinct vertical stripes and are set against a backdrop of bright, sandy ocean floor and scattered coral reefs. The lighting is natural, creating a sense of depth and movement.

ABOUT    SHARE    HOME

A vibrant underwater scene featuring a coral reef in the foreground with various types of coral, including acropora and boulder coral. A school of yellow and black bannerfish swims gracefully above the reef. In the background, a large school of dark-colored fish, possibly fusiliers or tangs, is visible against a deep blue ocean.
